PTFE Baking Sheet
Type: S-800 Standard
Thickness: 0.08 mm

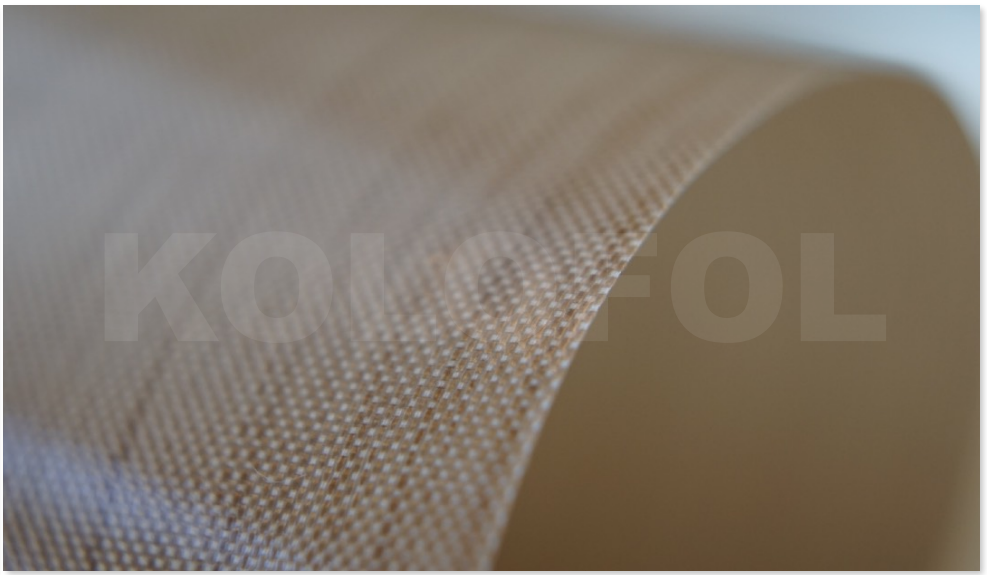

An economical baking sheet widely used in households and in bakeries for delicate pastries. When baking fatty or high-moisture foods, such as meat or thick vegetables, liquids may seep through the sheet, so the tray may still need rinsing. For meat dishes and sticky honey- or jam-filled pastries, choose S-1300, SM-800, SM-1300 or one of the silicone baking sheets.

PTFE Baking Sheet
Type: S-1300 Standard
Thickness: 0.13 mm

An economical, versatile baking sheet that is thicker and more durable than S-800. Suitable for meat, vegetables, pastries, pasta and other foods. Hot liquids such as fat, jam, honey and water do not penetrate the sheet, keeping trays cleaner. Used in catering for meats and vertical bun toasters, and by bakeries and pastry shops for sticky or delicate baked products.

Premium PTFE Baking Sheet
Type: SM-800 Pro
Thickness: 0.08 mm

Professional baking sheet developed for industrial applications and also popular in households. Apart from its thickness, its properties match SM-1300. Fast heat transfer, a closed surface and excellent release properties make it suitable for industrial use for up to 12 hours a day. Suitable for baking and grilling foods up to 260 °C. Commonly used in catering, fast-food restaurants, bakeries and pastry shops. Custom quotations are available by size and quantity.

PTFE Baking Mesh
Type: DF
Thickness: 0.98 mm

This robust approximately 1 mm PTFE-coated mesh is ideal where airflow must circulate below the food for an evenly crisp underside. Rendered fat collects underneath. Easy to clean using a sponge and detergent, usually in one or two minutes. Suitable for baking and grilling various foods at temperatures up to 260 °C.
